

KeenKeeper — Keep Your Friendships Alive

Basic Requirements (Must Do for Everyone)

- Your app must work on all screen sizes — mobile, tablet, and desktop
- Make at least 8 Git commits with clear, meaningful messages (e.g., "added friend card component")
- Your app must run without any errors after deployment
- Add a nice `README.md` file with your project name, description, technologies used, and features

Main Requirements — 50 Marks

1. Navbar

Navbar:

- Design the Navbar exactly like the Figma design
- Put your logo on the left side
- Put your navigation links on the right side — links are: Home, Timeline, Stats
- Each link should have an icon next to the text
- The active page link should look different (highlighted), just like the Figma design

2. Banner

Banner Section (Top of the Home page):

- Show a centered title and subtitle
- Add a button with an icon (e.g., "Add a Friend")
- Show 4 summary cards below the banner, following the Figma design

3. Friend Data (JSON File)

Create a file (e.g., `friends.json`) with 6–10 realistic friend profiles. Each friend object must have these fields:

```
{
  "id": 1,
  "name": "John Doe",
  "picture": "https://example.com/photo.jpg",
  "email": "john@example.com",
  "days_since_contact": 12,
  "status": "overdue",
  "tags": ["college", "close friend"],
  "bio": "Met in university. Love hiking together.",
  "goal": 14,
  "next_due_date": "2025-07-20"
```

```
}
```

- ⚠️ Use meaningful data. No "lorem ipsum" or fake placeholder text.
The `status` field can only be one of: `"overdue"` | `"almost due"` | `"on-track"`
- 💡 You may use an AI tool to help generate the JSON data.

4. 👥 Your Friends Section (Home Page)

- Display all friends from your JSON file as cards, following the Figma design
- Each card must show:

Field	Details
📷 Picture	Friend's photo
👤 Name	Friend's full name
📅 Days Since Contact	How many days ago you contacted them
🏷️ Tags	e.g., "college", "work"
🔴 Status	Background color changes based on status (match Figma)

- Cards must be shown in a 4-column grid layout on large screens
- Clicking a card must navigate the user to that friend's Detail Page

5. 👤 Friend Details Page — Layout

This page should have a two-column layout (follow the Figma design).

Left Column — Friend Info Card:

Show the following details:

- Profile picture
- Name
- Status (with color)
- Tags
- Bio
- Email

Also add these 3 action buttons (no functionality required for these buttons):

Button
 Snooze 2 Weeks
 Archive
 Delete

Right Column — 3 sections:

① Stats Cards (show 3 cards):

- Days Since Contact
- Goal (in days)
- Next Due Date

② Relationship Goal Card:

- Show the current contact goal
- Add an Edit button

③ Quick Check-In Card:

- Add 3 buttons with icons: Call, Text, Video
- When clicked, each button adds a new entry to the Timeline (see Section 6)

6. ⚡ Friend Details Page — Button Functionality

When a user clicks Call, Text, or Video in the Quick Check-In Card:

✓ A new timeline entry is automatically added with:

- The current date
- A title like:
 - "Call with Alex Johnson"
 - "Text with Alex Johnson"
 - "Video with Alex Johnson"

✓ A toast notification must appear when any of these buttons is clicked.

7. 📅 Timeline Page

This page shows the history of all interactions (calls, texts, video calls) logged from the Friend Details page.

This page must have:

- A "Timeline" heading at the top
- Timeline entries displayed following the Figma design
- Each entry must show:

Field	Details
 Date	When the interaction happened
 Icon	Different icon for Call / Text / Video
 Title	e.g., "Call with Sarah", "Text with Mike"

8. Footer

- Design and add a footer section that matches the Figma design

9. Responsive Design

- The entire website must work correctly on mobile, tablet, and desktop screen sizes

10. Other Requirements(Required for marks)

#	Requirement
10.1	Add a 404 Page for any unknown/invalid route
10.2	Show a loading animation while the friends data is being fetched on the Home page
10.3	Show a relevant toast notification when the user clicks Call, Text, or Video
10.4	Make sure reloading any page after deployment does not cause an error

Challenge Requirements — 10 Marks

C1. Friendship Analytics Page (Stats Page)

- The page must have a "Friendship Analytics" heading at the top
- Add a Pie Chart (using Recharts) showing the count of Call / Text / Video interactions — match the Figma layout

C2. Timeline Filter

- Add filter options on the Timeline page so users can filter entries by: Call, Text, or Video

C3. **GitHub README**

Add a well-designed `README.md` to your GitHub repository that includes:

- Name of your project
- A short description
- Technologies you used
- 3 key features of your project

★ **Optional (No Marks — Highly Recommended)**

These are not required but will make your project stand out:

- Sort timeline entries by date (newest / oldest)
- Search timeline entries by friend name or interaction type

Technologies to Use

Technology	Purpose
React.js/Next.js	Build the UI
React Router DOM/App router(Next.js)	Handle page navigation
Tailwind CSS+Any component library	Styling and responsiveness
Recharts	Chart

Deployment

Deploy your project on Vercel, Netlify, Cloudflare Pages, or anywhere else before submitting.

Submission
